

# Meta-Modelling as a Concept: The Conceptualisation of Modelling Methods

## Invited Tutorial

Tutorial Team

Dimitris Karagiannis, Hans-Georg Fill, Niksa Visic,  
Robert Woitsch, Wilfrid Utz, Srdjan Zivkovic, Elena Miron

## AGENDA

### PART I:

- Motivation
- Foundations & Technologies
- Conceptualization & Development
- Best Practices

### PART II:

- Hands-On Session

### PART III:

- Conclusion
- Outlook

## Scenario Description

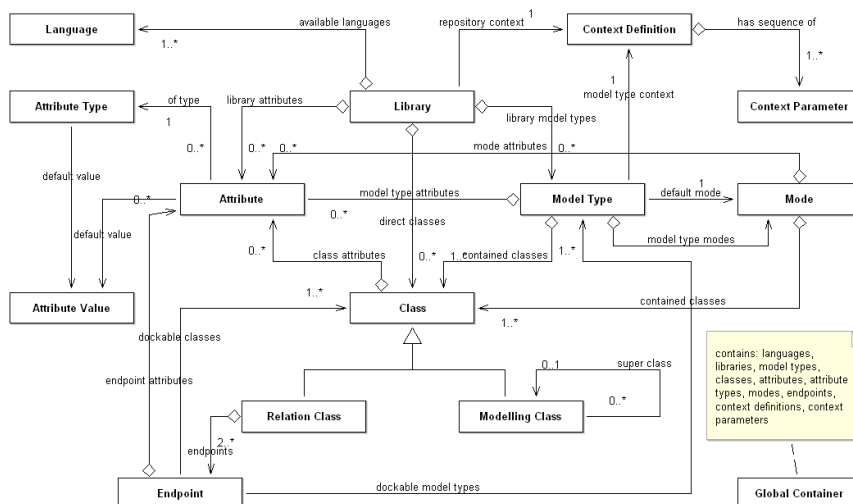

### Case:

Realise a modelling tool for the Modelling Language “Entity Relationship Model”.

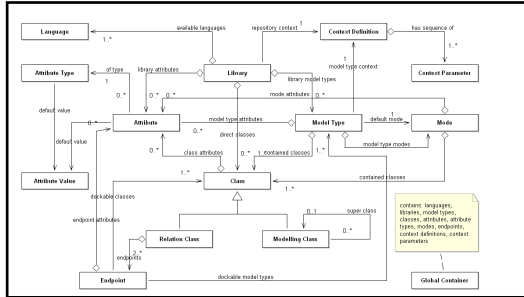

### Goal:

Demonstrate the development of a model editor for a defined modelling languages using common constructs from ADOxx Meta<sup>2</sup>Model.

## ADOxx Meta2Model

## Mapping Meta2Model with ER-Meta Model

**How to map  
generic  
Meta<sup>2</sup>Model to a  
concrete  
Modelling  
Language ?**

### ER – Modelling Language Definition

## Modelling Language Meta Model

### ER – Modelling Language Definition

### Conceptualised ER – Meta Model

#### Additional Aspects:

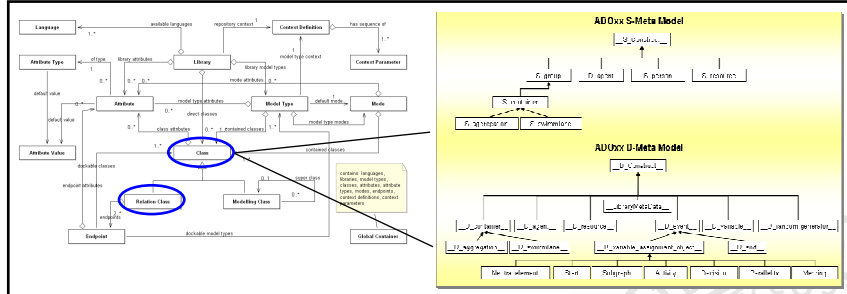

- Name
- Cardinality
- Key Attribute

#### Specification for Operationalization:

CLASS: Entity, Relation, Attribute,  
RELATIONCLASS: relates, has,  
Attribute: name (String), cardinality (String),  
key (Boolean), datatype (List)

## Operationalization of "CLASS" Concept

### Operationalisation : ER Modelling Language

CLASS: Entity, Relation, Attribute, \_ER-Concept\_  
 RELATIONCLASS: relates (Entity->Relation),  
 has (\_ER-Concept\_->Attribute),  
 Attribute: name (STRING), cardinality (STRING),  
 key (INTEGER), datatype (ENUMERATION)

**OMLAB**  
 www.omilab.org

## Operationalisable Meta Model

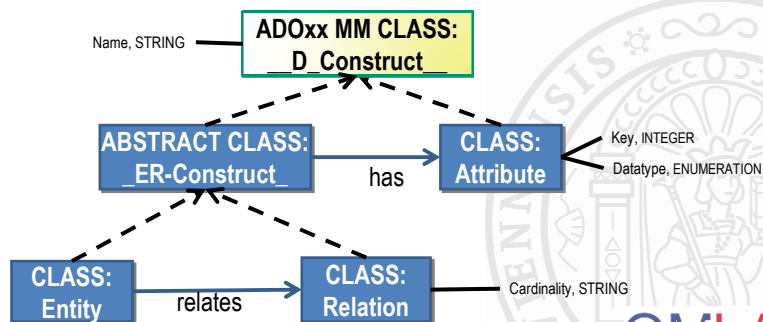

### Meta<sup>2</sup>Model

ABSTRACT CLASS  
 CLASS  
 RELATIONCLASS  
 ATTRIBUTE  
 ATTRIBUTETYPE  
 (STRING,...,ENUMERATION)

### Operationalisation MetaModel

Class inheritance ->  
 D Construct  
 GRAPHREP, ATTREP

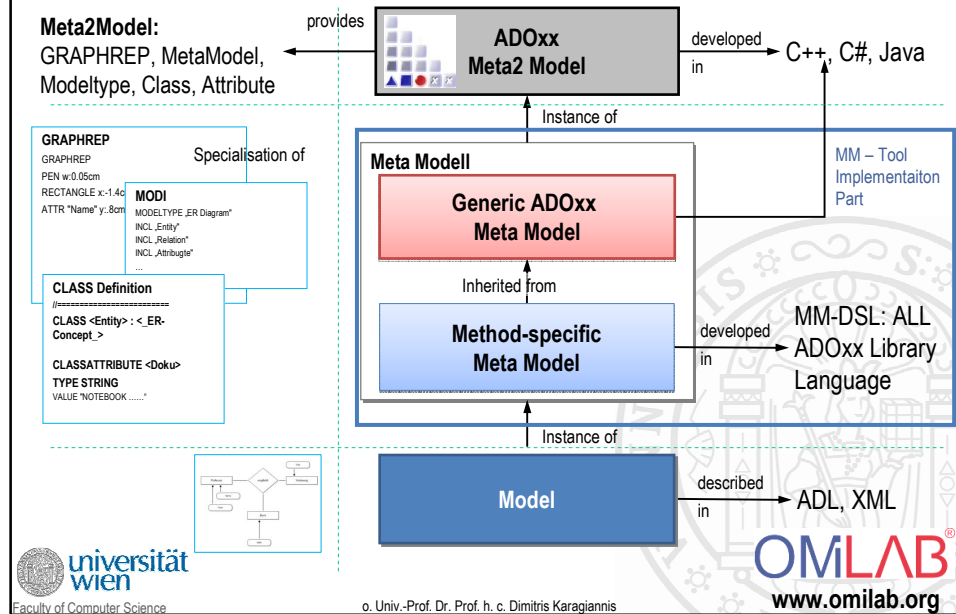

### ER-MetaModel

o. Univ.-Prof. Dr. Prof. h. c. Dimitris Karagiannis

 www.omilab.org

## Realising Modelling Language

## Provided Functionality of Metamodelling Platform

Used meta-modelling functionality :

•**Meta<sup>2</sup>Model:** MODELTYPE, GRAPHREP, ATTREP, ATTRIBUTE TYPE, CLASS

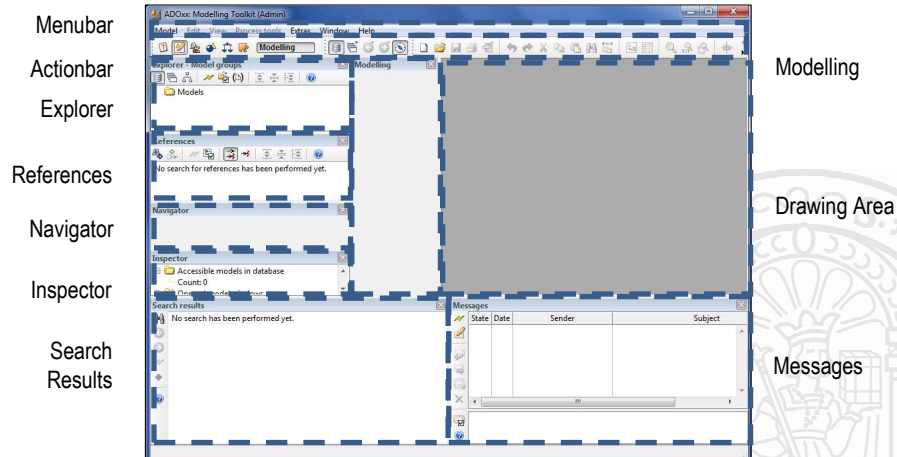

•**ADOxx Meta2Model Component:**

- Model Editor incl. Menubar
- Query engine incl. AQL syntax
- ADOscript interpreter and ADOscript syntax
- Database

## ADOxx Realisation HANDS-ON

1. Defining **MODELTYPES**
2. Inheriting **CLASSES** from ADOxx Meta Model
3. Implementing **GRAPHREP**
4. Inherit **RELATIONCLASSES** from ADOxx Meta Model
5. Defining **ATTRIBUTES** and **ATTREP**

## GOAL: Development of Modelling Toolkit

## Used ADOxx Functionality: Realising a Modelling Language

Introduction	
Setup of Implementation Environment	
<b>Modelling Language Implementation</b>	
Classes	✓
Relations	
Class Attributes and Attributes	✓
GRAPHREP	✓
ATTRREP	✓
CLASS Cardinality	
CONVERSION	✓
Model Pointer	
Attribute Facets	
Model Types	✓
	Mechanisms & Algorithms Implementation
	Core Functions for Model Manipulation
	Database
	Visualisation
	Query
	Transformation
	Configuration of ADOxx Components
	Visualisation
	Query
	External Coupling ADOxx Functionality
	ADOscript Triggers
	ADOscript Language Constructs
	Visualisation ADOscripts
	Visualisation Expression
	Query ADOscript
	Transformation ADOscript
	ADD-ON Implementation
	ADOxx Web-Service
	XML / ADL Import – Export
	ADOscript Batch Mode

# HANDS-ON

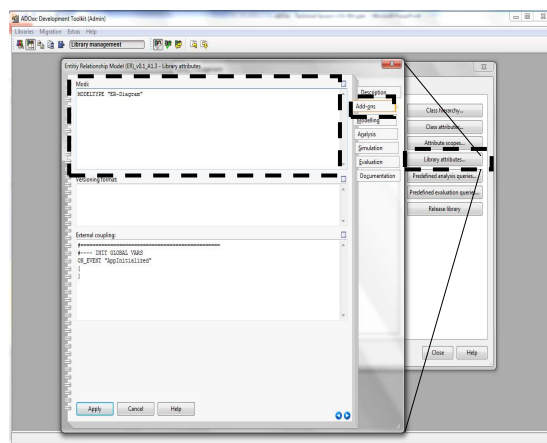

CASE: Entity Relationship Model

## 1. SCENARIO: REALISING A MODELLING LANGUAGE

## ADOxx Realisation HANDS-ON

1. Defining **MODELTYPES**
2. Inheriting **CLASSES** from ADOxx Meta Model
3. Implementing **GRAPHREP**
4. Inherit **RELATIONCLASSES** from ADOxx Meta Model
5. Defining **ATTRIBUTES** and **ATTREP**

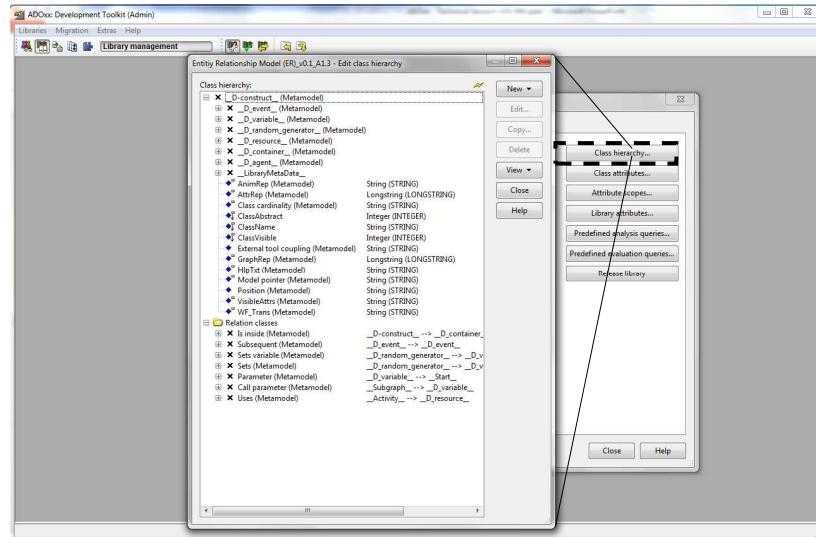

## Define Modeltype

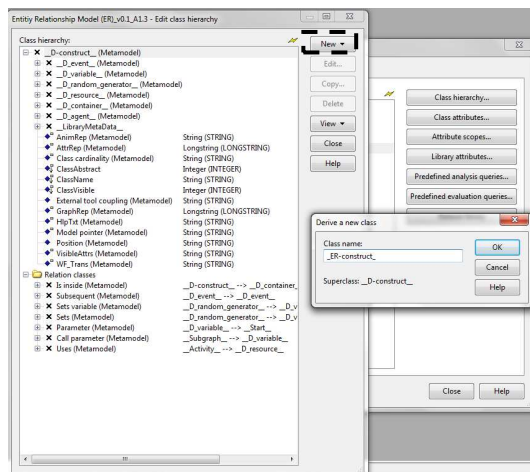

### Define the Model-Type:

1. Click "Library attribute" of the ER-library
2. Go to "Add-on" chapter
3. Define the Modeltype in the Model textfield.
4. "MODELTYPE "ER-Diagram"

## Library Management

## Define new class

### Define Abstract Class:

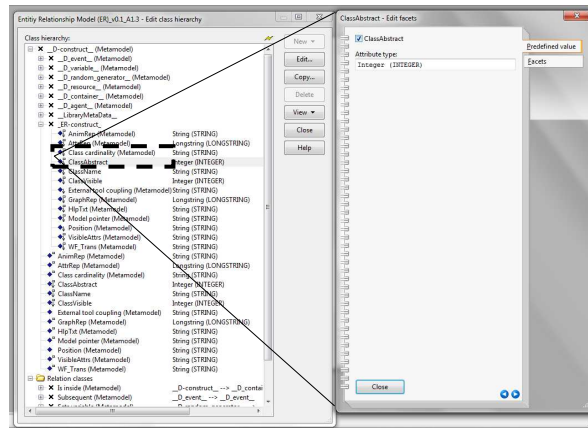

Add a new abstract class below the root element that is used to define “\_ER-construct\_” related issues

1. Select root class, click “New” -> “New class”

2. Name new class as an abstract class

Naming convention for abstract classes Pre- and Post-fix is “\_”.

## Make Class Abstract

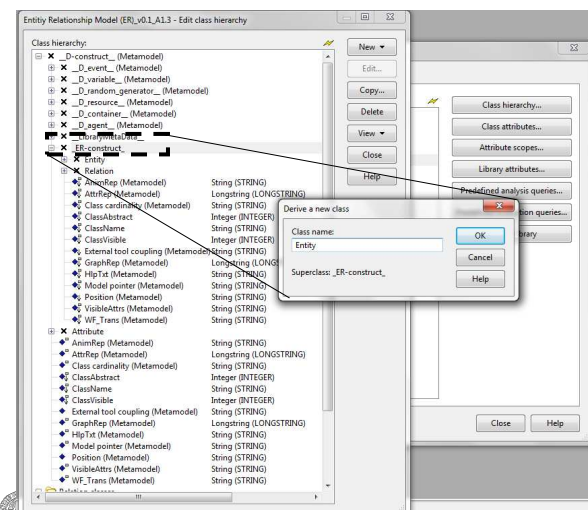

Make class abstract using  
"ClassAbstract" attribute

-> Effect:

class can not be instantiated  
in the modelling tool.

## Define ER-Classes

Make new classes:

Entity and Relation inherited  
from

\_ER-construct\_

and

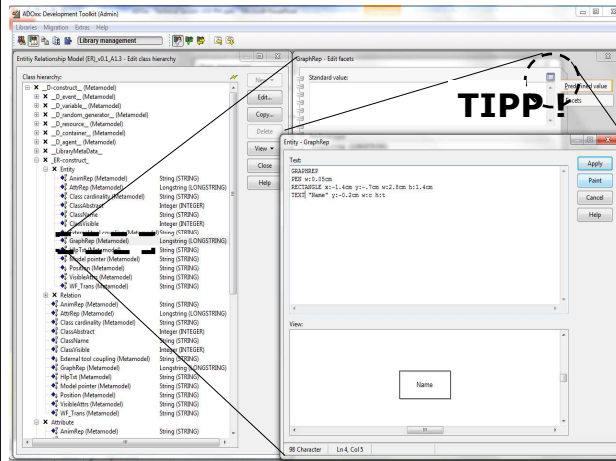

Attribute

Inherited from

\_D-construct\_

Leave them as classes, by  
not making them abstract.

## Implement GRAPHREP

### Implement GRAPHREP:

- Edit Attribute GRAPHREP
- Open GRAPHREP Editor
- Write GRAPHREP Code in Text field
- View current GRAPHREP with "Paint"
- Store the GRAPHREP with "Apply"

## Implementing GRAPHREP

Entity

Relation

Attribute

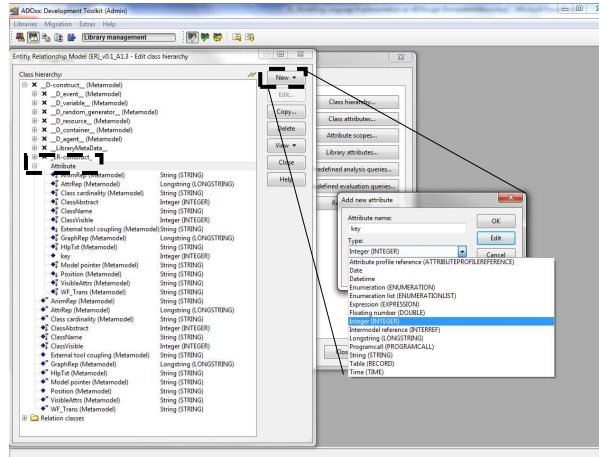

```
GRAPHREP
PEN w:0.05cm
RECTANGLE x:-2cm y:-.5cm w:4cm h:1cm
ATTR "Name" x:0cm y:0cm w:c:3.5cm h:c:1cm line-
break:rigorous
```

```
GRAPHREP
PEN w:0.05cm
FILL color:white
POLYGON 4 x1:-1.9cm y2:1.6cm x3:1.9cm y4:-1.6cm
ATTR "Name" w:c:2.5cm h:c:0.8cm line-break:rigorous
```

```
GRAPHREP
PEN w:0.05cm
ELLIPSE x:0.00cm y:0.00cm rx:3.00cm ry:0.80cm
ATTR "Name" y:-0.2cm w:c:2.8cm h:t
# Advanced Attribute Dependent Graphical Notation
AVAL k:"key"
IF ( k = 1 )
{
    LINE x1:-1.7cm y1:-0.5cm x2:-1.7cm y2:0.5cm
    LINE x1:-1.5cm y1:-0.6cm x2:-1.5cm y2:0.6cm
}
```

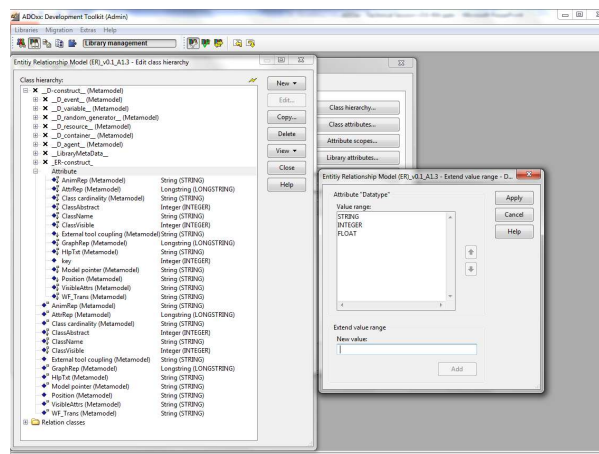

## Attribute Dependent GRAPHREP

### New Attribute

1. Select Class in which the new attribute has to be added
2. Add new attribute
3. Attribute name "key"
4. Type "INTEGER"

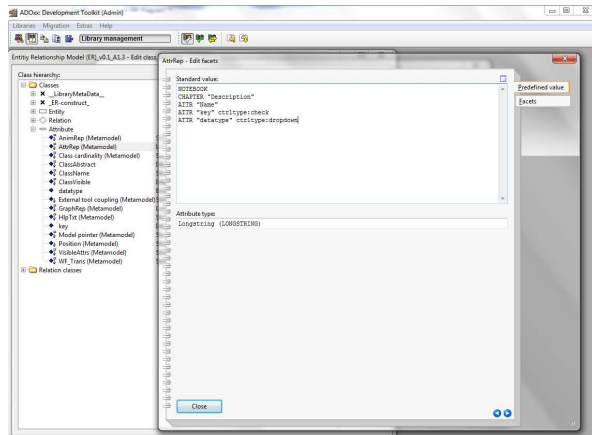

## Attribute Definition

### New Attribute

1. Select Class in which the new attribute has to be added
2. Add new attribute
3. Attribute name "Datatype"
4. Type "ENUMERATION"
5. Add value range

## Implement ATTREP

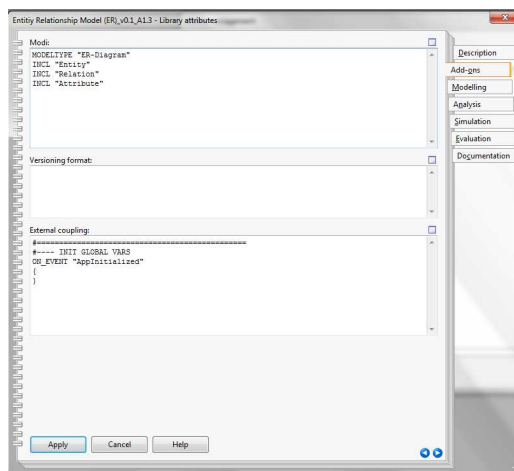

### Implement ATTREP

1. Select Class
2. Edit ATTREP Attribute
3. Define NOTEBOOK

- Chapter
- ATTR
- Group
- ctrltype

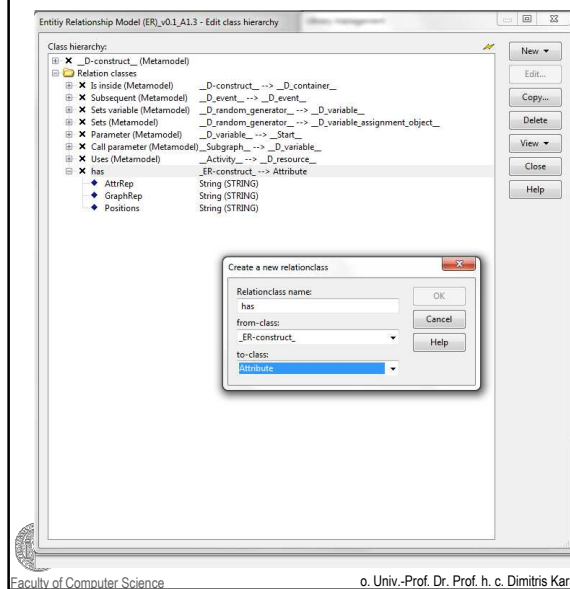

## Modeltype: Inclusion of Classes

### Define the Model-Type:

1. Click "Library attribute" of the ER-library
2. Go to "Add-on" chapter
3. Define the Modeltype in the Modi textfield.
4. "MODELTYPE "ER-Diagram"
5. Include classes:
  - INCL "Entity"
  - INCL "Relation"
  - INCL "Attribute"

## Definition of RELATIONCLASS

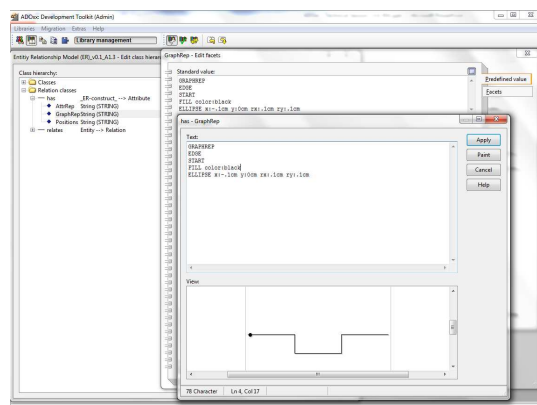

### Define RELATIONCLASS:

1. Click new RelationClass

2. Define:

- Name
- From-class
- To-class

## Implement RELATION GRAPHREP

### Define RELATION GRAPHREP:

1. Edit Attribute GRAPHREP
2. Open GRAPHREP Editor
3. Write GRAPHREP Code in Text field
4. View current GRAPHREP with "Paint"
5. Store the GRAPHREP with "Apply"

```
GRAPHREP
EDGE
START
FILL color:black
ELLIPSE x:-.1cm y:0cm rx:.1cm ry:.1cm
```
